

## KRAKEN KRAS-200 Servo Right-Angle Product Sweeps

### Servo Right-Angle Product Sweeps- Transfers Products at Up to 200 Products/Minute

#### **KRAKEN KRAS-200**

With the variety of high-speed synchronous packaging systems currently employed, there is always a parallel requirement for modular, integral machines which will handle randomly presented products from upstream packaging systems and synchronize product delivery into cartoning infeed machines.

The KRAKEN KRAS-200 right angle sweeps is a solution that can provide high speed product synchronization and right angle orientation delivery. This unit is contained within a small footprint, sanitary enclosure, either as a standalone machine, or integrated into a multi-variety of food/beverage product packaging feed and delivery applications. Products of varying shapes, packages, and orientations can be easily and gently handled at rates of 200 products/min.

Safety is a key component of the KRAKEN KRAS-200 offering complete operator safety system guarding from any moving sweep mechanisms. Conveyors both at product entry feed and discharge points are enclosed with tunnel guarding within 36" of the moving sweep device. Further, top entry guard door with interlock is provided facilitating problem-free system clear out.

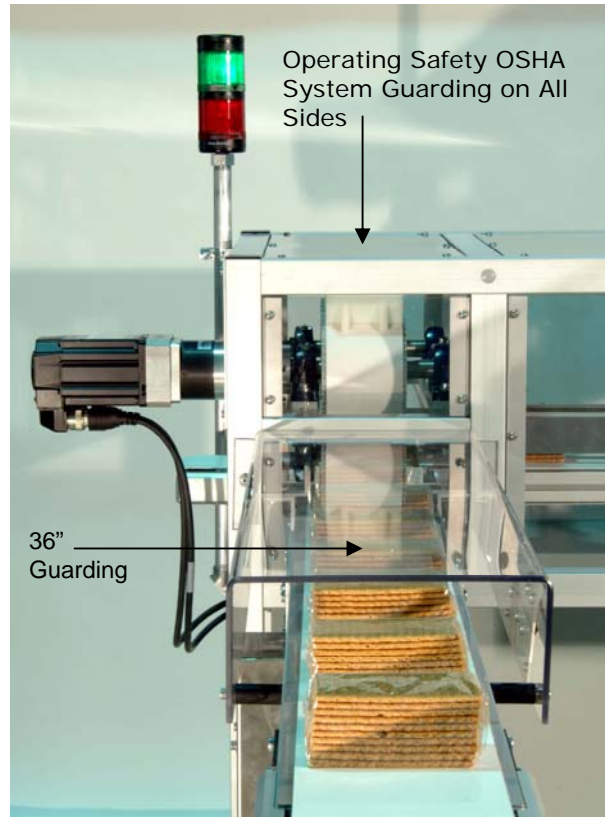

## Product Highlights

Factory Automation Solution Innovators

### Features at a Glance:

- Product right angle orientation and synchronous delivery to 200 units/min;
- Capable of handling products of various sizes and shapes (cereal bags, cracker slugs, frozen food trays, etc.);
- Right angle sweep motion completely servo based, providing optimum speed and product handling control;
- Unique sweep belt design, eliminating high maintenance chain and flight linkage maintenance;
- Integral infeed and discharge product conveying to integrate within packaging line, using Kraken center drive belt conveyors;
- Machine framing available in aluminum or stainless steel construction;
- Applied wide industry of accepted integrated servo controls or as specified;
- Additional options for extended sanitary applications.
